Passionate About Animal Health

Virbac
ANIMAL HEALTH

VIRBAC ANIMAL HEALTH RINSE AND WATER ADDITIVE PRODUCTS CAN BE AN EASY AND EFFECTIVE WAY TO INCREASE YOUR CLIENTS' HOME DENTAL CARE COMPLIANCE.

C.E.T.® ORAL HYGIENE RINSE

Contains ZINC CHLORHEXIDATE™ Anti-Plaque Agent, a synergistic combination of two effective oral hygiene compounds to guard against plaque without brushing. ZINC CHLORHEXIDATE Anti-Plaque Agent combines chlorhexidine, the most effective antiplaque agent available ^{1,2,3,4,5}, and zinc gluconate, a compound which inhibits plaque and calculus maturation, enhances the antiplaque activity of chlorhexidine and reduces bad breath. The rinse also contains cetylpyridinium chloride for fresher, clean smelling breath. The client friendly applicator utilizes a point-and-squeeze bottle that can be held below the pet's field of vision to minimize pet apprehension.

CET501 - 8 oz. Bottle

C.E.T. AQUADENT® DRINKING WATER ADDITIVE

Formulated by veterinary dental specialists to help freshen your pet's breath and prevent plaque accumulation in conjunction with a regular home dental care program. Results of a study "showed that cats whose drinking water was treated with xylitol had approximately half the plaque and calculus accumulation compared to when they were drinking untreated water."⁶ Easy to use – For pets over 25 pounds, simply add 2 teaspoons to a quart of pet's drinking water every day to provide **clinically proven** tested dental care every time your pet drinks.

CET503 – 500 mL Bottle

CET504 – 10 mL Packets in 30-ct. Dispenser
