

C.E.T.[®] AquaDent[™]

Effective

- Results of a study “showed that cats drinking water treated with xylitol had approximately half the plaque and calculus accumulation compared to when they were drinking untreated water.”

David E. Clarke, BVSc, AVDC, FAVD, MACVSc., 2006, J Vet Dent, 23(2)

- “In studies involving a total of 28 mixed breed dogs, all cases showed marked reduction in the bleeding index, gingival health showed remarkable improvement, and halitosis was significantly reduced.”

Peter Emily, DDS, AVDC

Safe

- "Based on published studies of xylitol toxicity in dogs and the APCC's (Animal Poison Control Center) experience, proper use of this product (according to label directions) should not present a risk of hypoglycemia in dogs. In addition, no significant hepatic toxicity would be expected either."

Eric K. Dunayer, MS, VMD, DABT; *Risk Assessment of Xylitol in Dogs and Cats*, APCC-2006

Convenient

- Use in conjunction with a regular home dental care regimen to help maintain oral hygiene.
- Just add 2 teaspoons per quart of water per day.

Now also available in easy-dose packets

- Pre-measured for ease of use.
- 2-teaspoons (10mL) per packet.
- Treats one quart of drinking water.
