

Why should you use Virbac Shampoos?

Virbac shampoos contain a specific patented encapsulation process called Spherulites®.

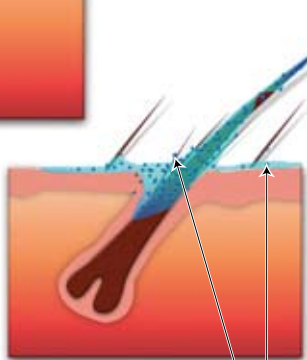

Here's how it works...

Hair shaft

before shampooing

Hair shaft
during
shampooing

Spherulites®

Hair shaft
after
shampooing

As you can see, the Spherulite microspheres actually adhere to the hair shaft after shampooing, forming a film that time-releases its' ingredients into the skin and haircoat.

The Spherulite innovation:

- Keeps moisture on the haircoat after bathing to keep hair both shiny and healthy.
- Soothes, moisturizes and helps to protect the skin of your pet.

Shampoo and Ear Cleanser Recommendation List

Keratolux® Shampoo

A tar free medicated shampoo for routine use on dogs or cats.

Allergroom® Shampoo

A hypoallergenic shampoo for routine use on dogs or cats. It will not wash off Advantage® or Frontline®.

Etiderm® Shampoo

A mild, antibacterial shampoo for routine use on dogs or cats.

Epi-Otic® Ear Cleanser

An ear cleansing and drying solution for dogs and cats. Fresh apple blossom fragrance.

Cerulytic™ Ear Cleanser

A non-irritating, dewaxing ear solution for dogs and cats.

Get the Virbac Difference...

Use Virbac products with patented Spherulite® technology to give your pet a healthy, shiny, natural skin and coat.

Which shampoo is best for my pet?

Choosing a shampoo is as important as choosing the proper food for your pet. Your pet's doctor can help you select the best shampoo. Some shampoos are for routine use, while others are medicated for specific purposes and needs.

Do not use a human shampoo on your dogs and cats. Your pet's skin is quite different from your own skin. A common belief is that shampooing your pet is harmful to the skin and hair. Not true. But using the wrong shampoo can be harmful.

General Shampooing Instructions

- Use extra caution when bathing cats and puppies. Also, exercise caution on wet surfaces.
- Clip and remove hair mats.
- Bathtime is a good time for doing pedicures.
- Eye protection may be recommended using a sterile ophthalmic ointment – ask your veterinarian.

Eight easy tips on bathing your pet

1. Using lukewarm water rinse your pet well (hand-held showerheads are ideal for this).
2. Apply a sufficient amount of shampoo to the top of the neck and along the back of your pet.
3. SPECIAL AREAS: The face and ears should be washed with a soapy washcloth to avoid getting soap in the eyes or ears.
4. Work shampoo into a rich lather adding more lukewarm water, if necessary.
5. Rinse shampoo thoroughly from pet until water runs clear.
6. Repeat steps 2, 3 and 4.
7. Allow shampoo to sit 5-10 minutes.
8. Again, rinse shampoo thoroughly from pet until water runs clear of any shampoo.

A few good tips on cleaning your pet's ears

Always have your veterinarian examine your pet's ears before cleaning.

Clean the ear with a ceruminolytic (dewaxing agent). Fill the ear canal with the dewaxer and massage the solution into the ear. Wipe the ear with gauze or cotton swab. This will remove all of the wax build up in the ear.

NEVER USE A COTTON TIPPED APPLICATOR

Clean the ear with an ear cleanser. Following the same procedure as the ceruminolytic, fill the ear canal with the cleanser and massage the solution into the ear.

Wipe the ear with gauze or a cotton swab. Repeat the procedure until all dirt and debris is removed.
