

NEW CE MODULE ADDED TO VIRBAC DERM UNIVERSITY

Free CE Credits in Dermatology Available Online

FORT WORTH, Texas (October 18, 2006) – Virbac Animal Health, the leader in veterinary dermatology, announced today that a new module has been added to the Virbac Derm University Web site. Virbac Derm University is the first online training that offers educational resources and free continuing education (CE) credit and is available specifically for veterinary dermatology.

“Principles of Topical Therapy” focuses on the diagnosis and treatment of skin conditions. It was written by Kimberly Coyner, DVM AVCD and Andrew J. Rosenfeld, DVM ABVP and will take less than an hour to complete. Veterinary professionals completing the module are eligible to receive one CE hour.

“We created Virbac Derm University in response to the demand for a specialized information and training source on veterinary dermatology,” said Denise Skurdalsvold, Virbac dermatology senior marketing manager. “As a leader in the dermatology market, we’re pleased to make this addition available as a convenient resource for veterinarians and their staff. These CE offerings are another example of the value-added services Virbac offers the veterinary community.”

Virbac Derm University delivers detailed dermatology instruction and information in a multimedia format that includes photos, dynamic bullet points and streaming audio narration. Participants monitor their progress by taking an online quiz at the end of each training module, and those who successfully complete the full program receive a certificate of achievement and free CE credit.

Veterinary practitioners and their staff can access the new module along with the first module “Atopic Dermatitis” at www.virbacdermu.com.

The new dermatology module is another addition in Virbac’s free online CE offerings to veterinarians and their staff. The other Virbac CE opportunity is CET University (www.cetuniversity.com).
